

LAW ON CHEMICALS - THE IMPACT OF CHEMICALS ON HUMANS AND THE ENVIRONMENT

Lecturers: Mališa Antić

Date: 26-27th September 2018

Language: Serbian

Venue: University of Belgrade, Faculty of Chemistry, Belgrade

Organised by: University of Belgrade, Faculty of Chemistry, Belgrade

Course duration: 2 day (12 hours)

Price: free of charge

Target audience: represents of local governments

Goal: The Law on Chemicals was adopted in 2009. The aim of this law is to fully harmonize our regulations with the EU regulations in the field of management of chemicals. Within this law, several rules were adopted, the most important of which are the Rules on the Classification of Chemicals. The aim of the course is to familiarize course participants with the basic guidelines of the Law and the rules for the classification and labeling of chemicals which are toxic for humans and the environment.

Significance of the course: The users of chemicals must be informed in an adequate manner about the hazardous properties of chemicals, in order to protect the health of humans and the environment.

Contents: General remarks on the Law on Chemicals; Classification of chemicals based on properties that affect the life and health of humans; Classification of chemicals based on properties that affect the environment.

Methods and forms of work: lectures, discussions, case studies, individual activities of participants.

Number of participants: 5 – 20
